

EXPERIMENT NO.: 14

TITLE: Collaborative Git/GitHub Workflow Using Fork and Pull Request

AIM: To demonstrate collaborative development using Git/GitHub by forking a repository, creating a feature branch, making changes, submitting a pull request, reviewing changes, and merging the approved branch into the main branch.

OUTPUT:

RESULT: The fork-and-pull request workflow was successfully demonstrated. Changes were committed and pushed to the feature branch, a pull request was created and reviewed, feedback was addressed, and the approved changes were merged into the main branch.
